

NETSTAR

Health monitor.

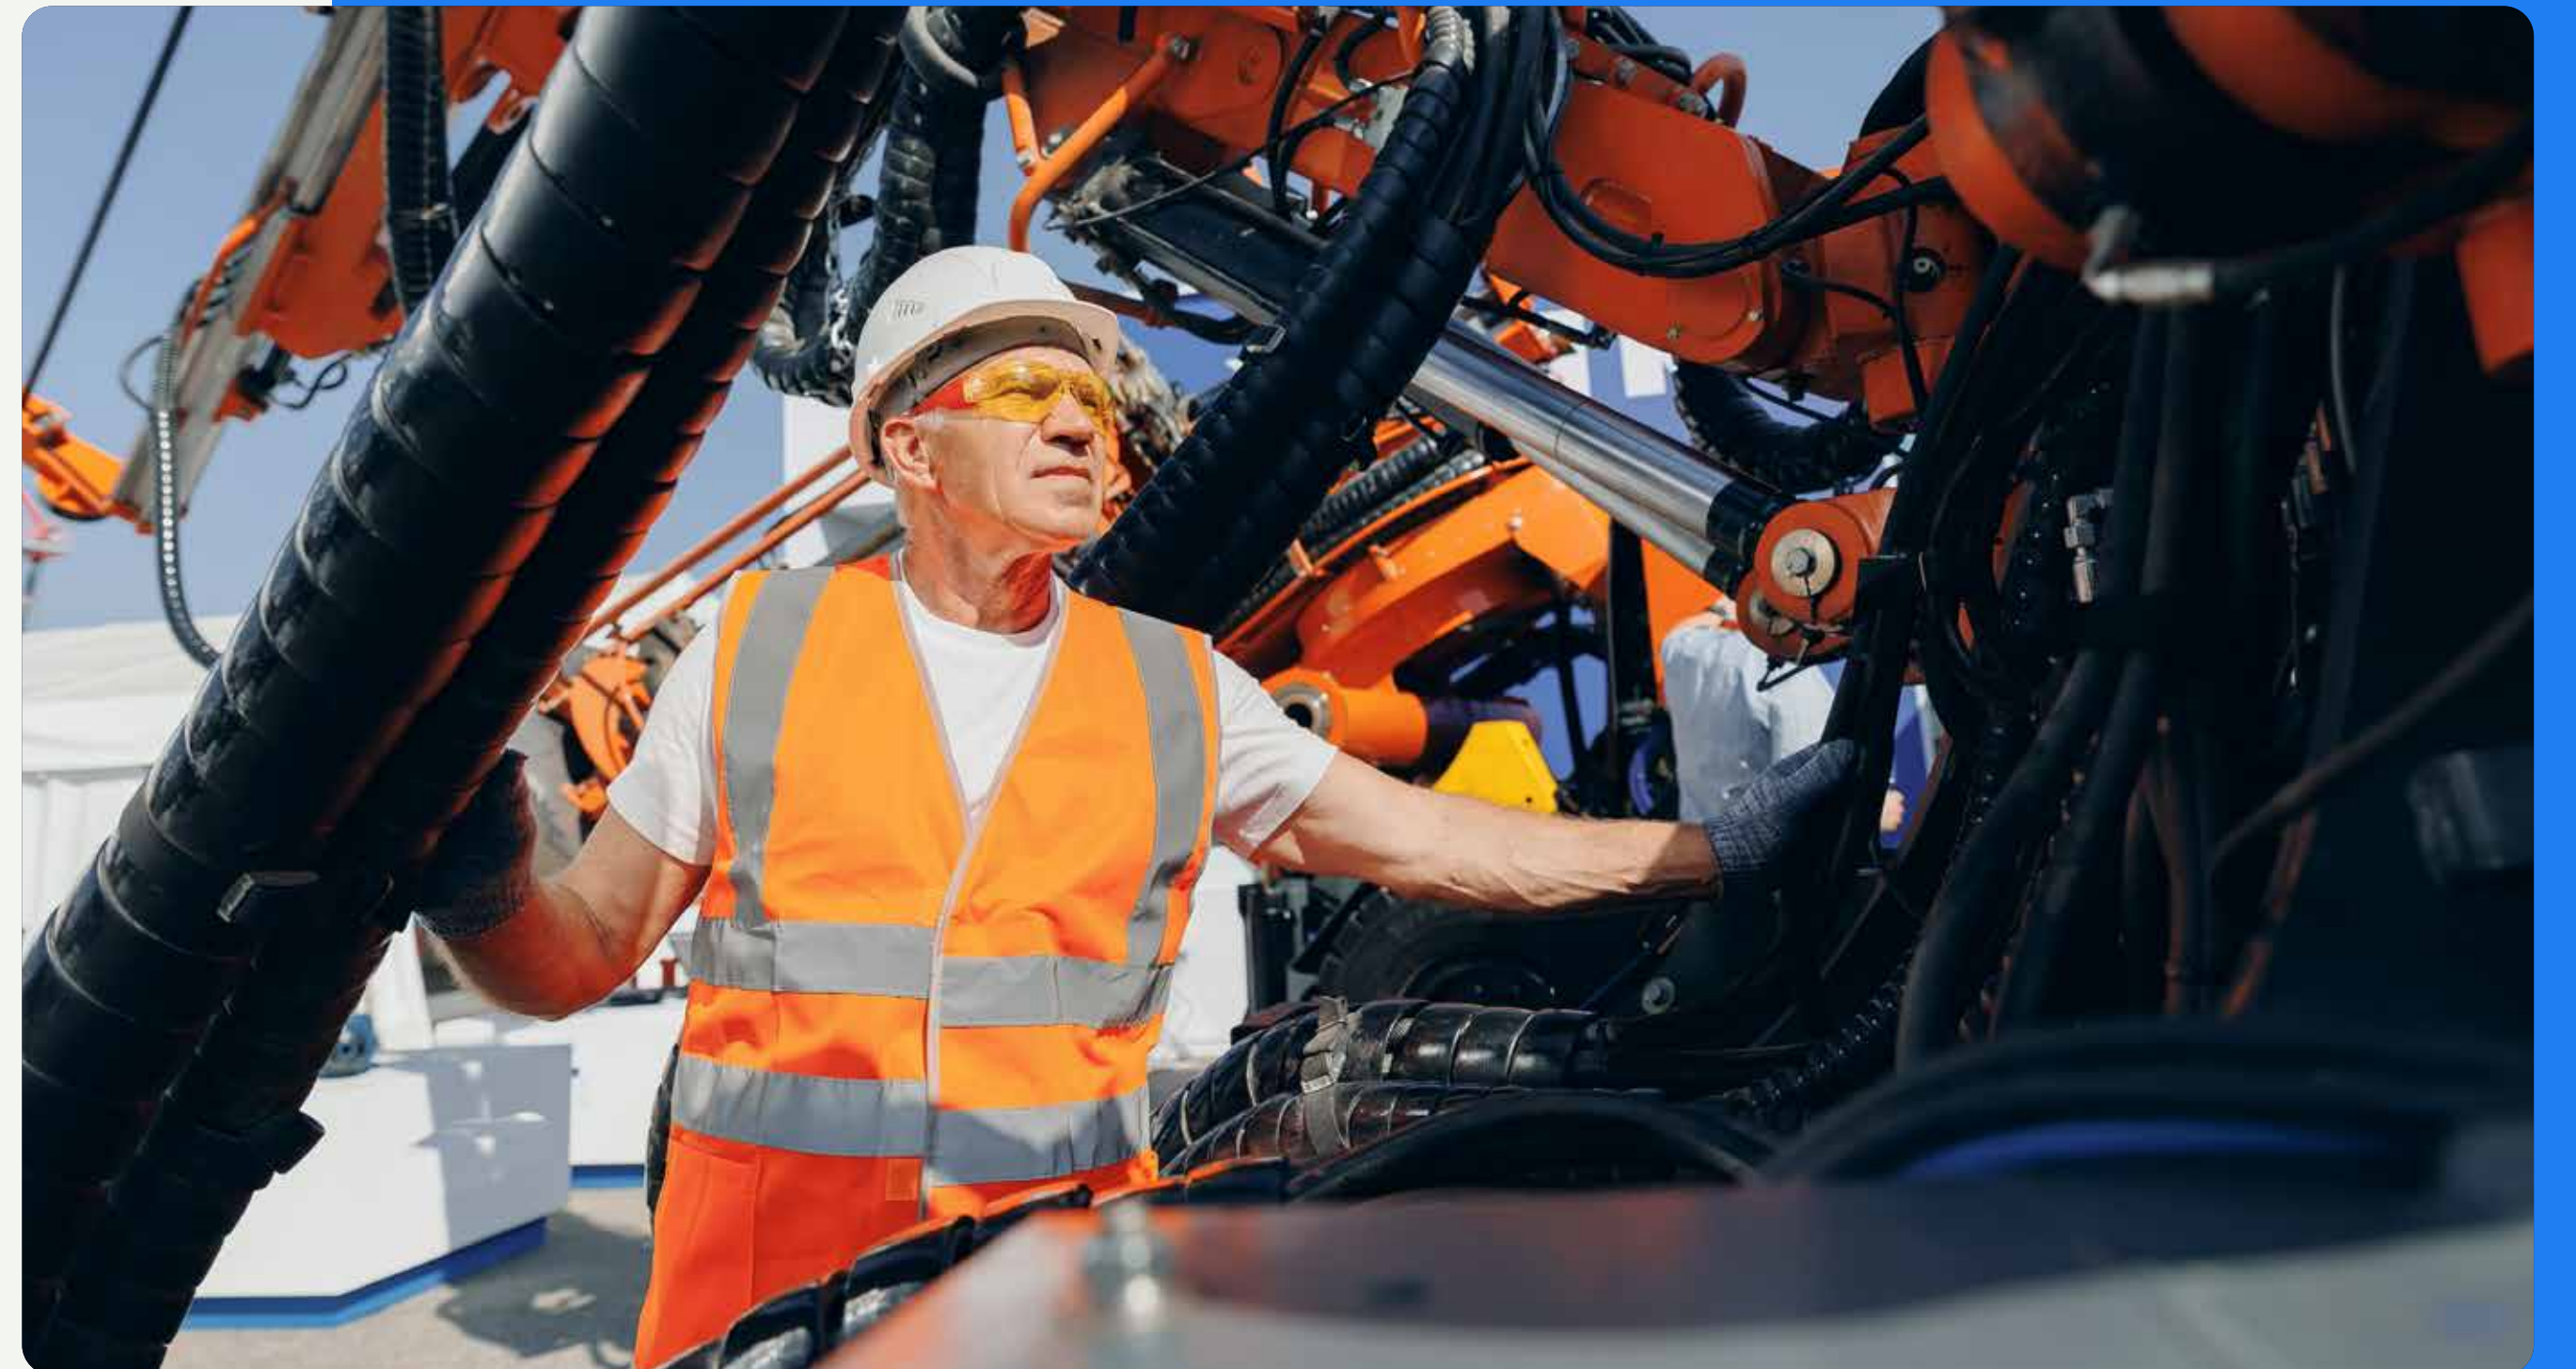

Proactively monitor
employee health in
real time

✕ Your challenge

Ensure miners safety & prevent incidents

Health and safety are top of mind in the mining sector.

Accidents and incidents take a toll in terms of injury to workers and equipment damage. In addition to putting employees in danger, it also carries a huge financial cost and is administratively time-consuming.

How the health monitor works

✓ Proactive fatigue management

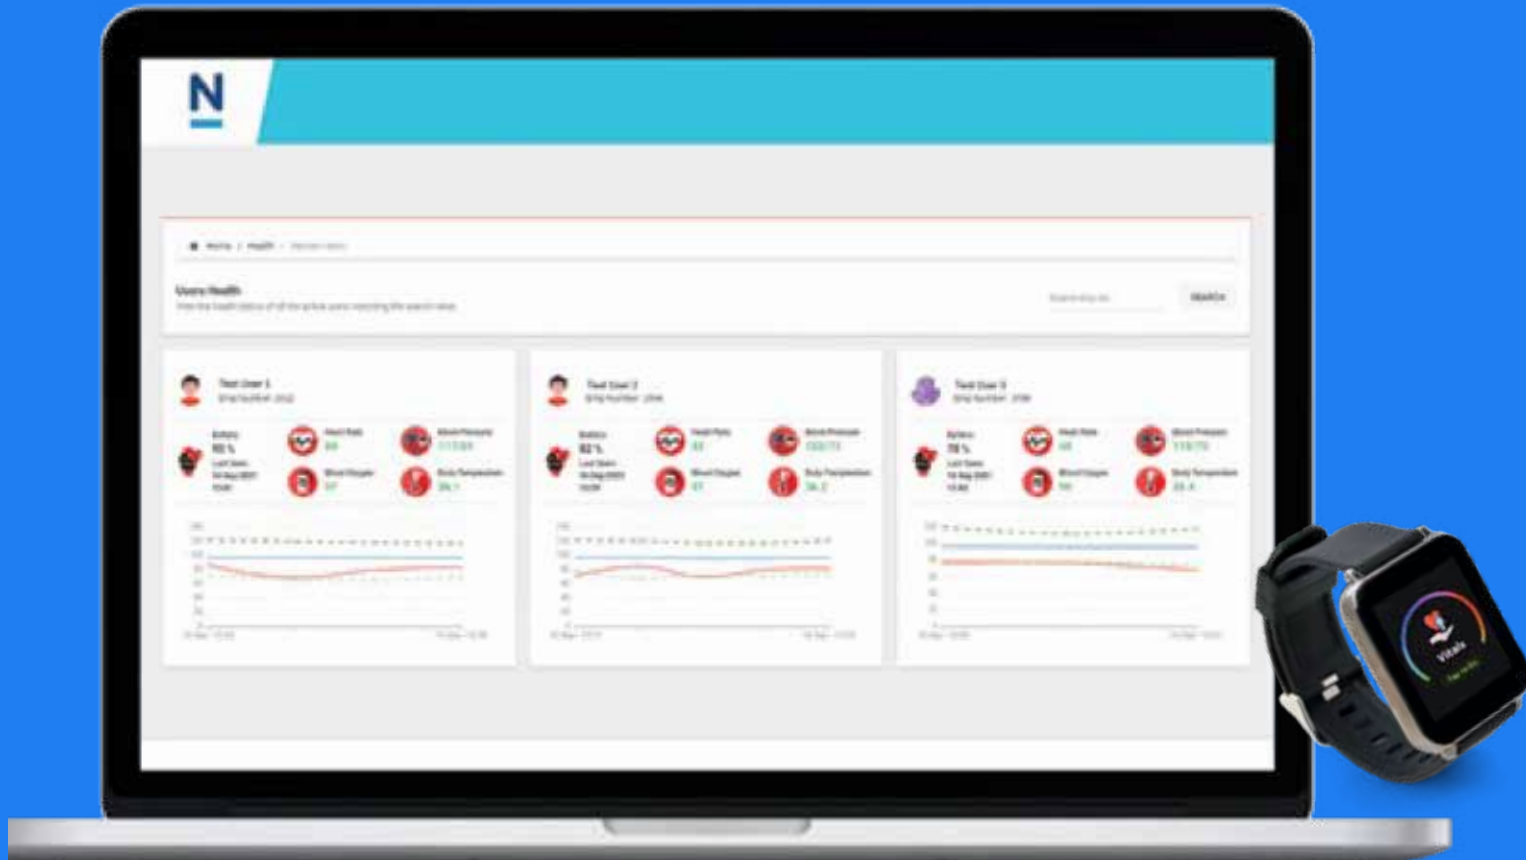

The system builds a health and vitals profile for each person to detect when they become tired. Tracking user-health in real time, the system helps prevent injury to users and the equipment they work with.

✓ Risk notification

The Netstar Health Monitor provides low-risk notifications to the miner, and medium to high-risk to you via the Netstar Bureau.

✓ Health information dashboard

Your dashboard gives you a real-time view of the status of your workers. This data gives you the power to make informed decisions, quickly.

How the health monitor **benefits you**

Using Netstar Trailer Manager keeps you covered from pick-up to drop-off. We empower you to easily assign drivers to trailers, manage routes, monitor cargo and drive delivery.

Detect and monitor operator health-related information in real time through notifications of deteriorating staff vitals (e.g pulse, heart rate).

Prevent adverse events by assisting in the detection of a health issue of an employee proactively.

Increase safety and revenue with fewer events, reducing costs on related investigations and claims.
