

NETSTAR

A SUBSIDIARY OF ALTRON

**DATA-AS-A-SERVICE (DaaS)
FOR FLEET MANAGERS**

**TAKE DATA TO THE
NEXT LEVEL WITH OUR
VALUE-ADDED SERVICE**

YOUR CHALLENGE

GAIN A COMPETITIVE EDGE USING DATA

Sustainable fleet management must optimise routes, minimise risks and ensure delivery.

Increasing security risks and accidents due to driver behaviour increases costs and hurts the bottom line.

Understanding how to leverage data to its maximum benefit is essential in today's competitive world. However, if the data gathering process is cumbersome and inefficient, the value gained from data analytics is reduced.

OUR DATA-AS-A-SERVICE SOLUTION

BOOST REVENUE AND REDUCE COSTS THROUGH DATA

With Netstar's Data-as-a-Service (DaaS) solution, fleet owners can reap the benefits of data without having to worry about the often-thorny technical aspects of managing large data sets.

The Netstar DaaS model gives you the ability to stream and reliably consume data. We deliver data that is secure and compliant with POPI & GDPR. The Netstar DaaS enables you to focus on the data you want to see.

The relevance and value of accurate vehicle data is a powerful tool for fleet management. Data about driver behaviour and other risk factors, like usage, time of day, area, overnight storage, etc., are accurately available. We store all the data all the time within our big data platform. This allows for the extraction of vast amounts of data for analysis, tracking your assets and more.

SAVE TIME

Access the data you need in the output and interval option that suits your business the best.

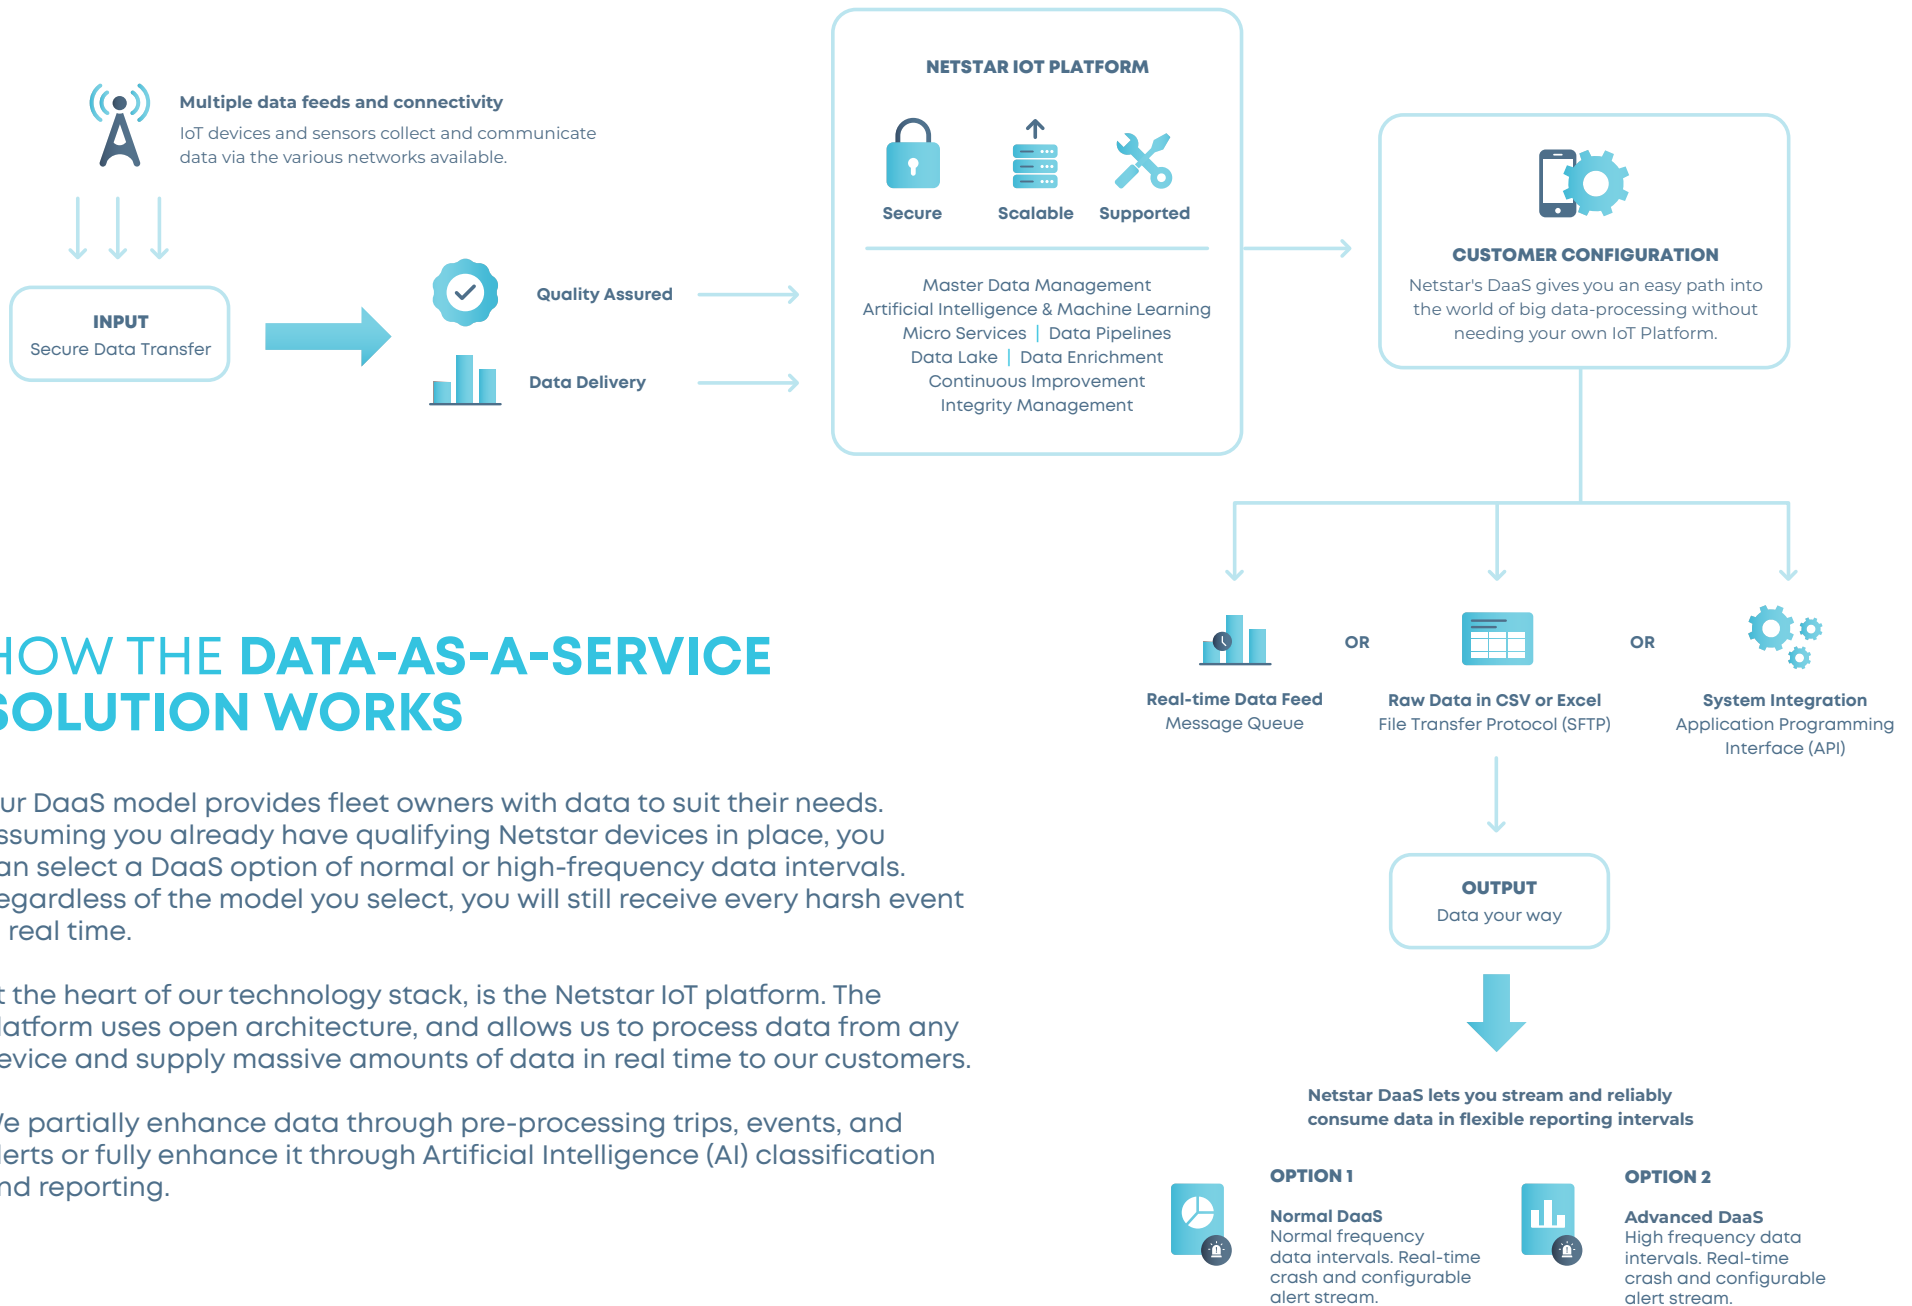

DATA QUALITY

With built-in data checks when cleaning, describing, and distributing data, we improve efficiencies.

VALUE THAT GROWS

Gain a true competitive edge from harnessing the value of data without worrying about the technical complexities.

HOW THE DATA-AS-A-SERVICE SOLUTION WORKS

Our DaaS model provides fleet owners with data to suit their needs. Assuming you already have qualifying Netstar devices in place, you can select a DaaS option of normal or high-frequency data intervals. Regardless of the model you select, you will still receive every harsh event in real time.

At the heart of our technology stack, is the Netstar IoT platform. The platform uses open architecture, and allows us to process data from any device and supply massive amounts of data in real time to our customers.

We partially enhance data through pre-processing trips, events, and alerts or fully enhance it through Artificial Intelligence (AI) classification and reporting.

THE RESULT

ENDLESS POSSIBILITIES FOR FLEET OWNERS

Get better access to vehicle data to improve how you manage your assets. With our DaaS model, you get the right data at the right time to benefit your operation.

Reduce costs & improve efficiencies

Better fleet asset tracking & utilisation

Reduce driver downtime & idling

Reduce risky driver behaviour

On-time delivery & better productivity

Better stock control

OTHER POSSIBILITIES ENABLED BY THE RIGHT DATA

Improve accident & loss prevention strategies

Identify patterns to reduce risks

Provide tax logbooks & lower insurance premiums

Real-time hard event notifications

Accident & incident reporting

Alert data & trends

Pipeline & trending data

Future planning & business modelling & route scheduling

Advanced crash management reporting

Driver identification & verification against policy

Driver fatigue & distraction monitoring
